

# Project Scribe

## Sprint 4 Summary

**Sprint 3 Completion:** 90%

**Total Project Completion:** 55%/100%

### Progress Update

This sprint continues the *development* phase of our project which started, now focusing on adding an extra layer of security in user authentication, continuously building the app editor, and deploying the app in the dev environment. This involved the following tasks:

- Add OTP verification during signup using email
- Email validation
- Enhance login/signup validations
- Enhancing account recovery components
- Adding featured templates
- Complete home component
- Build the note editor
- Add route transitions
- Deploy in development environment

### Sprint Retrospective

- **What went well:** For this sprint, we've made significant progress in the project. The user management modules have been further refined and are now close to finished, we've also completed the home, and are now building the note editor. We're also able to deploy for the first time in our development environment and started testing the login and signup module extensively.
- **What could be improved:** I would say that this sprint went extremely well that we're at the peak of our momentum and the only improvement we should make is even make our development "faster".
- **What needs to be done:** For our next sprint, the tiny remaining tasks will be carried over and we aim to finish our note editor and display the note data to our components.
