

# Project Scribe

## Sprint 3 Summary

**Sprint 2 Completion:** 90%

**Total Project Completion:** 41%/100%

### Progress Update

This sprint continues the *development* phase of our project which started last week, now focusing on enhancing the user authentication, route guarding of app paths, and the core features of the app like home and main components. This involved the following tasks:

- Enhanced login and signup validations
- Implement Route guard
- Add account recovery components
- Designed the main app navigation
- Add a wildcard page component
- Add search component
- Started the home component

### Sprint Retrospective

- **What went well:** For this sprint, we've finished almost all of the sprint tasks assigned for this week. We have continuously refined the features of the app and are now ready to fully build the core components that have been started this sprint. The development workflow has also improved compared to last week.
- **What could be improved:** We need to streamline the use of Angular Material moving forward. Some of the team members still have not grasped the concept of Material Design and are designing components that deviate from it.
- **What needs to be done:** For our next sprint, the tiny remaining tasks will be carried over and the core features will be continued, such as the notes, tasks, and folders modules.
