

Project Scribe

Sprint 2 Summary

Sprint 2 Completion: 70%

Total Project Completion: 29.44%/100%

Progress Update

This sprint has commenced the *development* phase of our project, primarily focusing on assembling and designing the front-end components and some back-end as well. This involved the following tasks:

- Setting up the Angular project
- Designing the landing page
- Designing the login page
- Designing the signup component
- Implementing backend for login
- Updating the project to Angular 18
- Integrating Angular Material 18
- Adding initial core app components

Sprint Retrospective

- **What went well:** For this sprint, we've accomplished the majority of the assigned tasks. Developing the front-end components turned out to be better than what we have envisioned. We have also successfully implemented Angular Material to be used in some parts of our page after having problems with adding it in our project initially.
- **What could be improved:** Updating to Angular 18 and setting up Angular Material was a bit more challenging than expected. This caused some tasks to lag behind the timeline.
- **What needs to be done:** For our next sprint, the remaining tasks will be carried towards it and we will accelerate our development to keep up with the project timeline.
