Note-taking Application

Our project aims to develop a web-based note-taking app using Angular, providing users with a streamlined and intuitive platform to capture, organize, and manage their notes efficiently.

As a new user,
I want to sign up for
an account so that I
can keep my class
notes organized.

As an existing user,
I want to log in to
my account so that I
can access my
existing notes and
continue working
on them.

As a student, I want to create and edit notes with rich text formatting so that I can organize my thoughts, and structure my class notes for better understanding.

As a busy professional, I want to use a powerful search function so that I can save time on locating specific notes.

As a notetaker, I want to choose from a variety of predefined note themes or color schemes so that I can personalize the look and feel of my notes.

CONCLUSION

In conclusion, with features like user authentication, rich text formatting, search functionality, and customizable themes, this application caters to a wide range of users seeking a comprehensive and efficient note-taking solution. By implementing this project, we will not only showcase our proficiency in Angular but also create a valuable tool that empowers users to boost their productivity and stay organized.

THANK YOU!
