Project Scribe

Sprint 5 Summary

Sprint 5 Completion: 88%
Total Project Completion: 66%/100%

Progress Update

This sprint continues the *development* phase of our project mainly focusing on the core components of the Scribe app and other further refinements. This includes the following:

- Build custom RTF Editor
- Create APIs for creating, editing, displaying, and deleting notes
- Create Featured Templates functionality
- Account Recovery backend
- Enhanced route transitions
- Add Folders Component UI

Sprint Retrospective

- What went well: For this sprint, we've made significant progress in the core functionalities of our web app. Despite deviating from the initial plan of using a library to build the note editor, we're still able to keep up with our project timeline with very few unfinished tasks.

- What could be improved: The testing of our web app needs to be intensified and done regularly to ensure bugs are caught early on. We will further improve our approach in this matter.

- What needs to be done: For the last formal sprint, we aim to finish the remaining core features of our app: Search, Tasks, and Share notes. We will try to enhance our development and workflow strategies to ensure that these features are completed ahead of time as much as possible.
